PROJECTS

LIBRASYS

It is a JAVA project which is used to manage, issue, and return books in a library by using jswing and other tools with the mysql database. It provides user authentication for security purpose.
Developed a web based full stack project using react, springboot, mysql database which provides users and admins to seamlessly access the resources with role based authentication.

AMAZONA

It is a MERN stack project, a clone of amazon fully developed using mern stack with mongodb compass database. It functions as an amazon website and with limited products and limited filters.

GESTURE CONTROLLED SWITCH

It is an IOT based project where we have used APDS – 9960 Gesture Sensor module to implement this particular project. It works with the gestures of the hand like up and down, left and right. It basically functions like an electric switch.

DOC CONNECT

It is a Full stack based project where we have used react as frontend, springboot as backend, and mysql database to develop a healthcare solution for seamless doctor appointments and recommendation and a bmi calculator.
